The slimline probe LMP 305 with silicon stainless steel sensor is designed for continuous level measurement in confined space conditions e. g. 1" pipes. Permissible media are clean or lightly polluted water and thin fluids.

A piezoresistiv stainless steel sensor with low thermal error, an excellent linearity and a long term stability, is basis of LMP 305.

### Preferred areas of use are

#### Water

level measurement in confined space conditions

ground water monitoring

depth or level measurement in wells and open waters

drinking water system

level measurement in container
